

# **Architecture Evaluation**

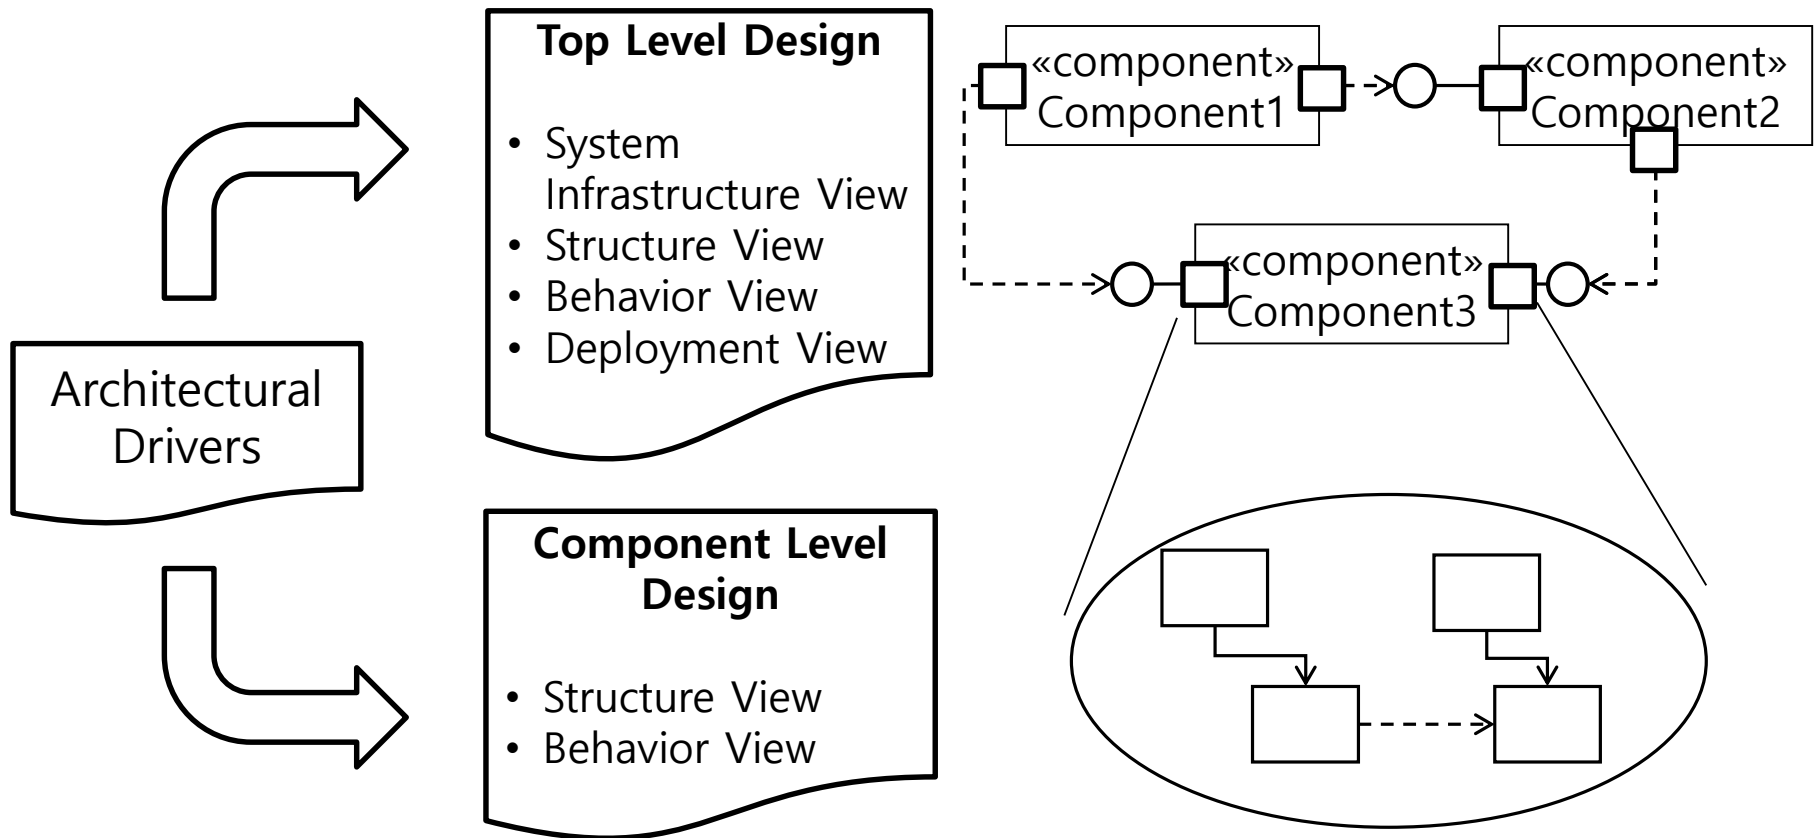

# 목차

---

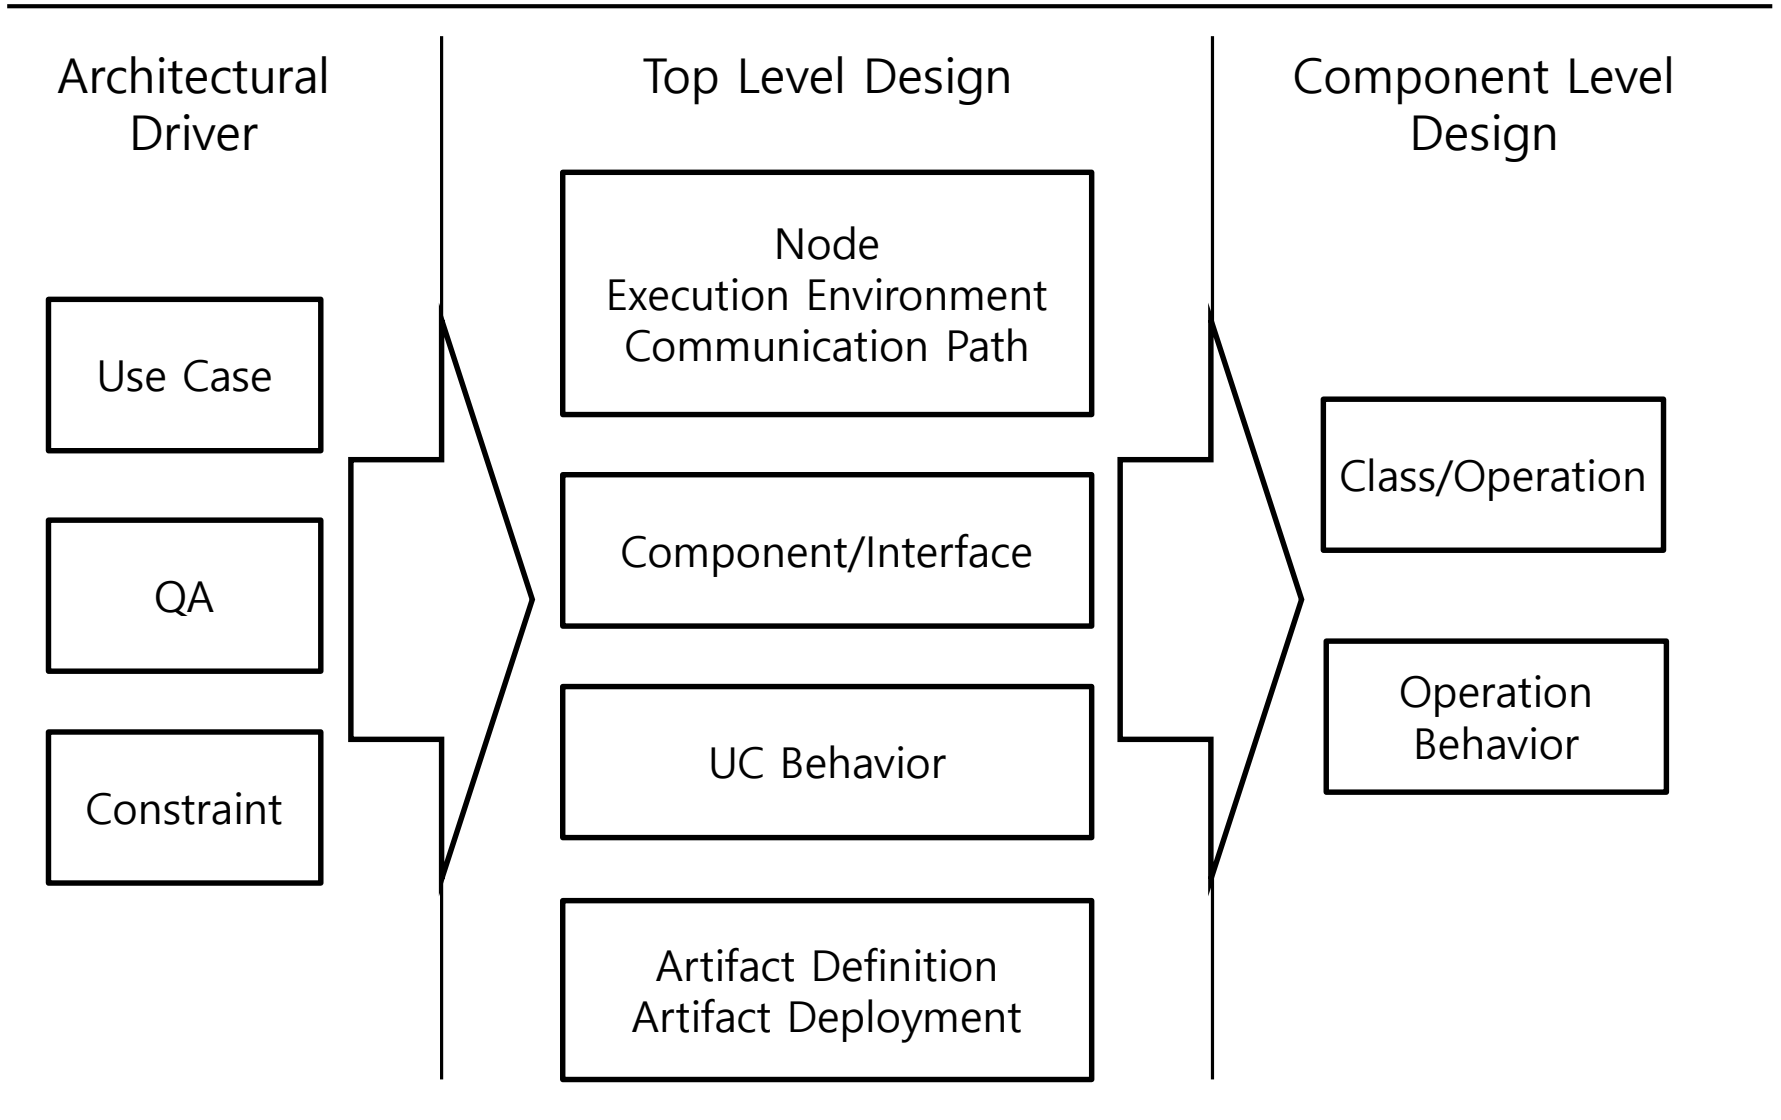

- ❖ 아키텍처 평가 개념
- ❖ 아키텍처 평가 산출물
- ❖ Use Case Traceability
- ❖ Quality Attribute Traceability

# Architecture Evaluation

- ❖ Make sure that the architecture you've designed can provide all that's expected of it: that is, architectural drivers

# Traceability

# 아키텍처 평가 산출물

Chapter	Section
2. Project Overview	
3. System Overview	
4. Architectural Drivers	
5. Top Level Design Description	
6. Component Design Description	
<b>7. Architecture Evaluation</b>	7.1 Traceability Summary
	7.2 Use Case Traceability
	7.3 QA Traceability
	7.4 Constraint Traceability

## 7.1 Traceability Summary

---

- ❖ Summarize the traceability for each architectural driver

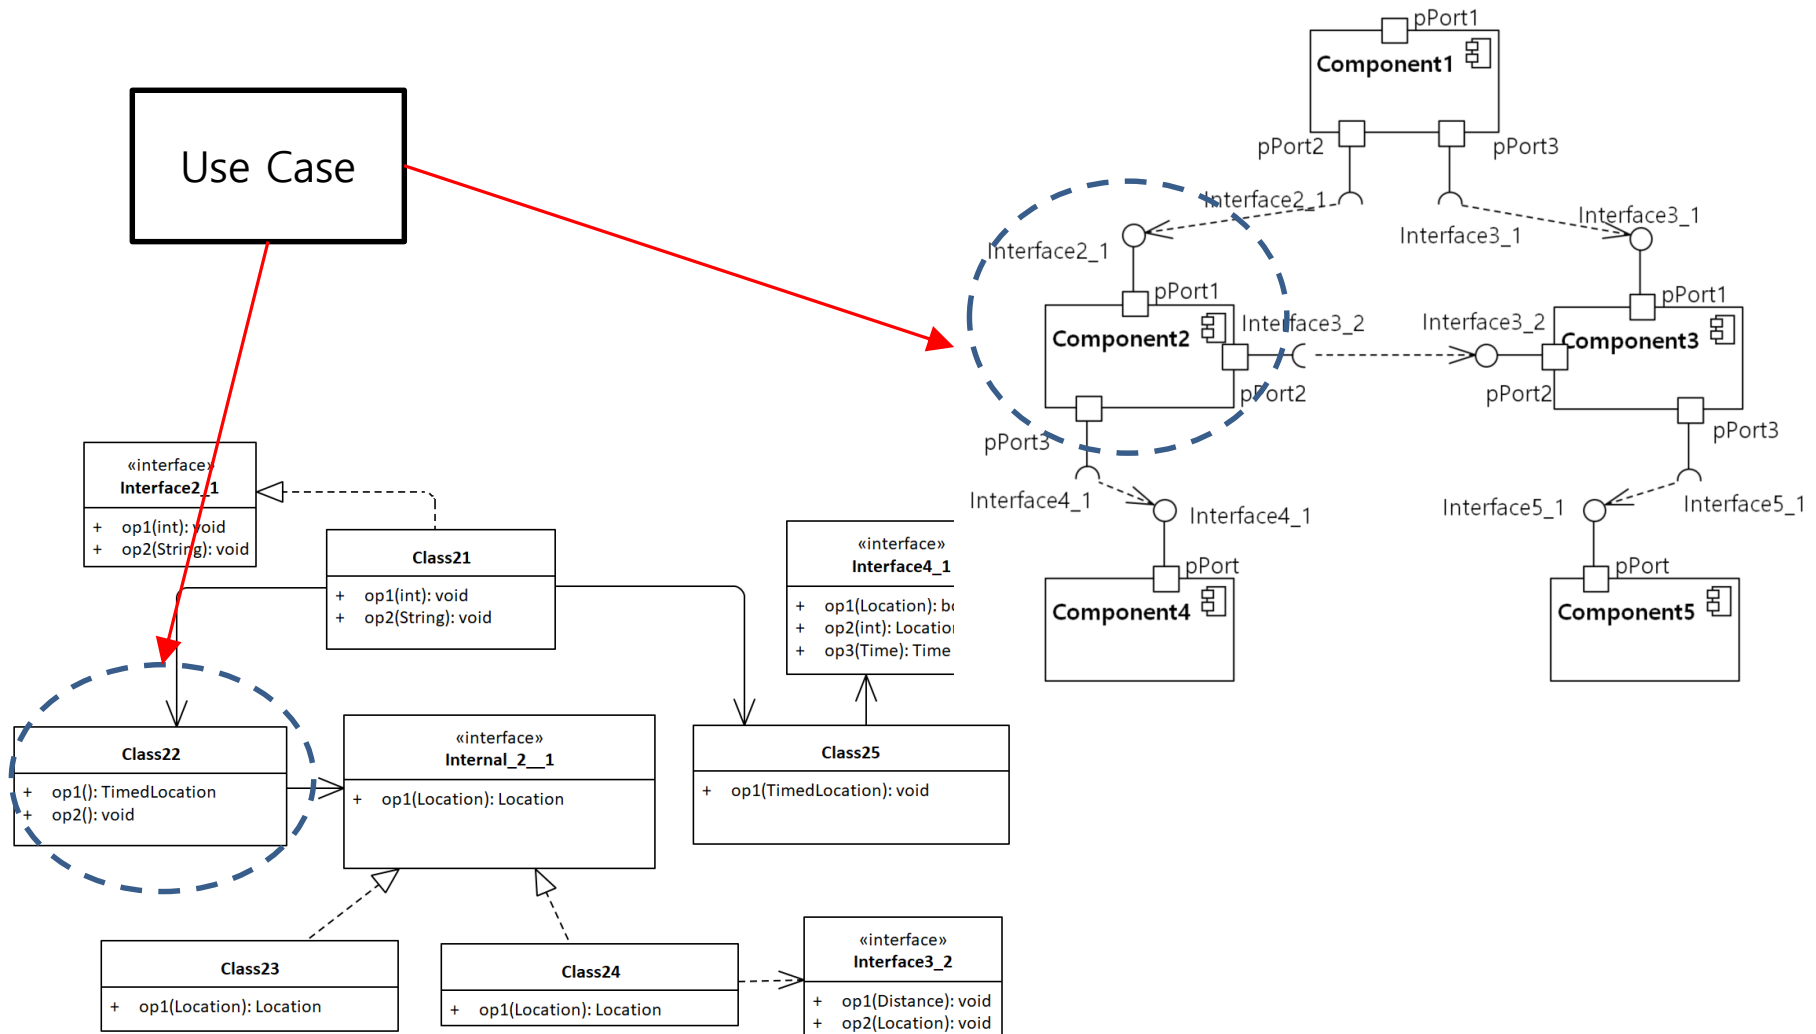

Architecture Driver		Design Elements
ID	Title	
UC-01		
UC-02		
...		
QA-01		
QA-02		
...		
BC-01		
...		
TC-01		
...		

# Use Case Traceability

---

- ❖ Use cases are first analyzed to ensure that the design will meet the required functionality.
- ❖ Functionality has little influence on structure, but in evaluating the system with respect to the key functional use cases, is a critical aspect of system design.
- ❖ How to trace a use case
  - Identify the design elements relevant to the use case
  - Show how the preconditions are true at the beginning of the use case
  - Trace through each step of the use case.
    - ✓ Show how control, data, events, and so forth move through the system, and
    - ✓ how elements interact to satisfy the use case
  - Explain how the postconditions are true after the end of the use case

# Use Case Traceability

# Quality Attribute Traceability

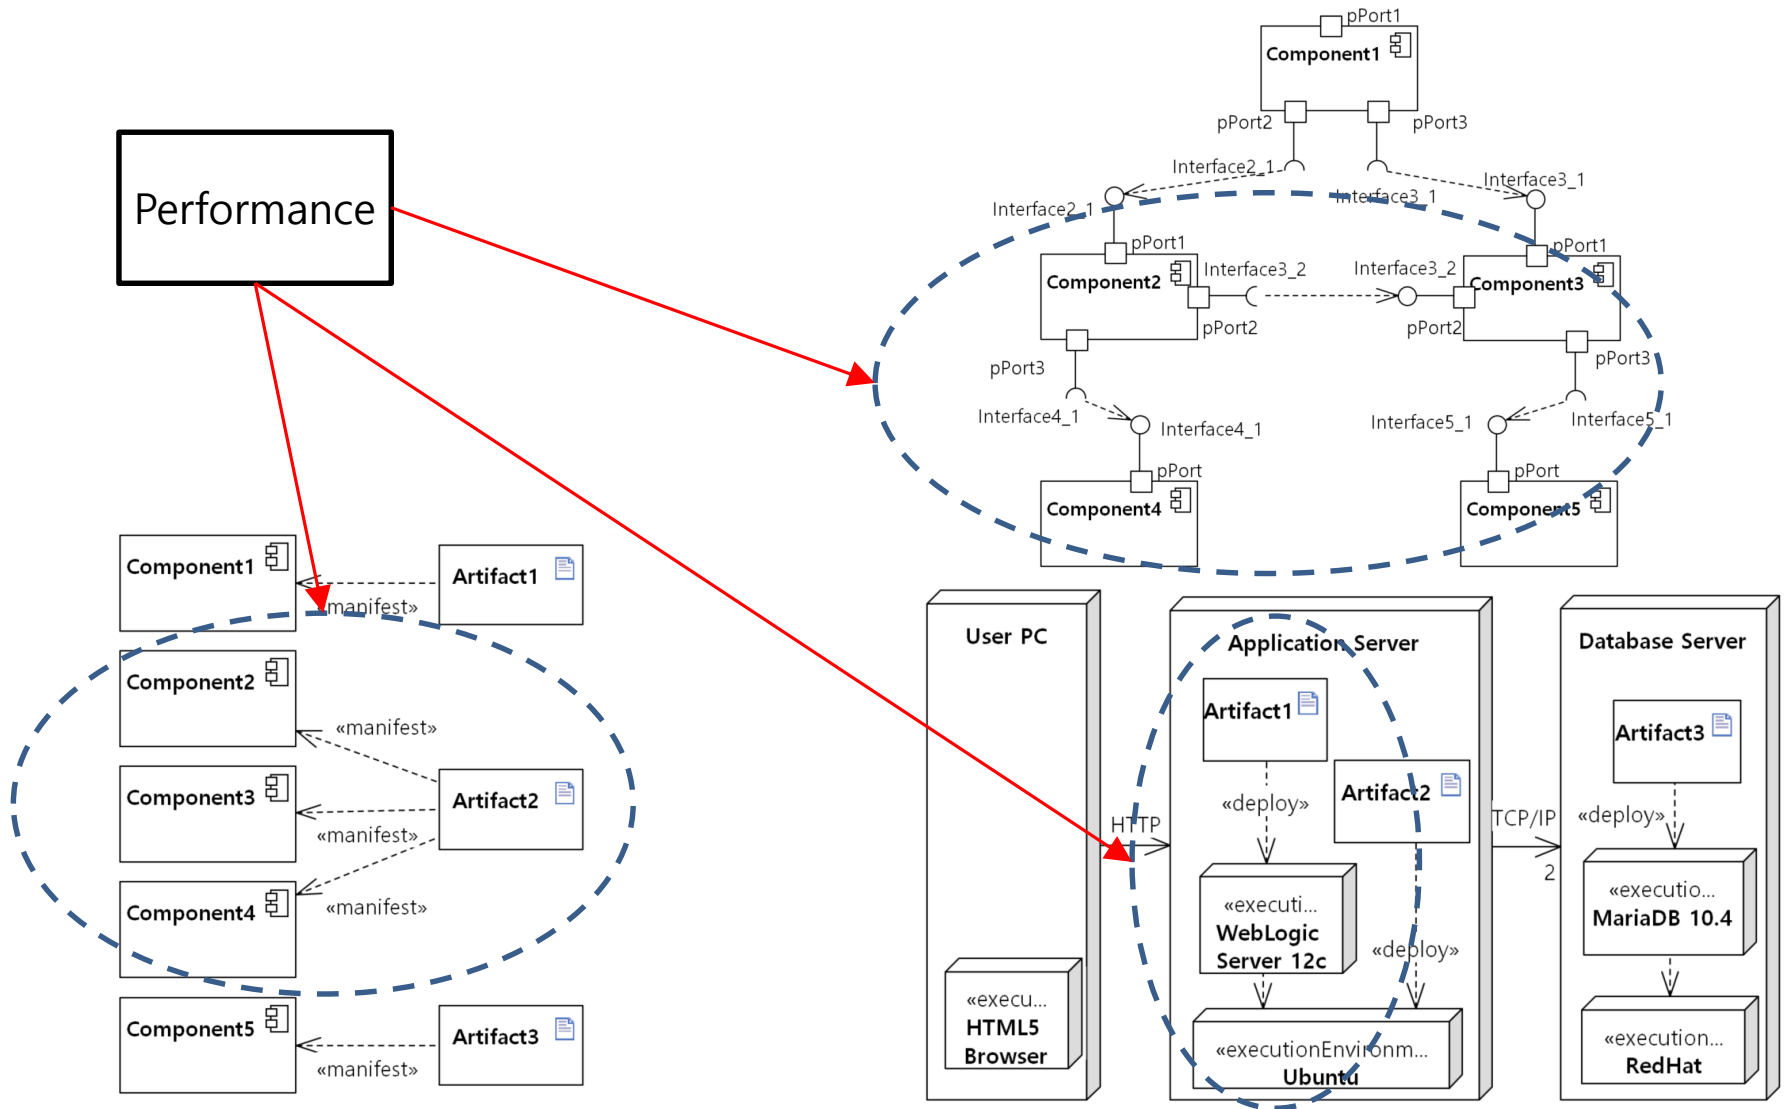

---

- ❖ The architecture is evaluated with respect to how well the design satisfies the quality attribute
  
- ❖ How to trace a quality attribute
  - Identify the view(s) to best explain how the design responds to the stimulus described in the quality attribute scenario
  - Identify the source of the stimuli relative to the architecture design
  - Identify and explain the specific artifact(s) described in the quality attribute scenario and show its position in the design.
  - Describe how the system will respond by using the design to guide the analysis
    - ✓ Performance-oriented scenario: show how data moves through the system and the anticipated timing of the data movement
    - ✓ Modifiability-oriented scenario: show what structures will change due to the stimulus and the relative ease and cost of those changes
